

# GitHub Issues - Part 1

## Smart Service Station Booking & Management System

### Issue #1 – Analyze Functional Requirements

Identify and document all functional requirements for the system.

### Issue #2 – Analyze Non-Functional Requirements

Define performance, security, usability, and scalability requirements.

### Issue #3 – Identify User Roles

Define Customer, Admin, Manager, and Mechanic permissions.

### Issue #4 – Create Use Case Diagram

Design the use case diagram for the complete system.

### Issue #5 – Create System Workflow

Document the workflow from booking to invoice generation.

### Issue #6 – Create Design System

Design the color palette, typography, spacing, icons, and reusable components.

### Issue #7 – Design Landing Page

Create the public homepage UI in Figma.

### Issue #8 – Design Login Page

Create the customer and admin login interfaces.

### Issue #9 – Design Registration Page

Design the customer registration interface.

### Issue #10 – Design Customer Dashboard

Design the customer dashboard with booking and vehicle information.

### Issue #11 – Design Admin Dashboard

Design the admin dashboard with analytics and management tools.

### Issue #12 – Design Booking Pages

Design the complete booking flow UI.

### Issue #13 – Design Vehicle Management Pages

Design pages for adding, editing, and viewing vehicles.

## **Issue #14 – Design Inventory Pages**

Design inventory management screens.

## **Issue #15 – Design Report Pages**

Create report dashboard and printable report templates.

## **Issue #16 – Initialize Git Repository**

Create the project repository and configure Git.

## **Issue #17 – Configure Frontend**

Set up the frontend framework and project structure.

## **Issue #18 – Configure Backend**

Configure backend services and API structure.

## **Issue #19 – Configure Database**

Set up Supabase/MySQL database.

## **Issue #20 – Create Database Schema**

Design database tables and relationships.

## **Issue #21 – Configure Environment Variables**

Set up environment variables and secrets.

## **Issue #22 – Configure Routing**

Create application routing structure.

## **Issue #23 – Create Shared Components**

Develop reusable UI components.

## **Issue #24 – Create Navigation Bar**

Build the responsive navigation bar.

## **Issue #25 – Create Sidebar**

Develop sidebar navigation for dashboards.

## **Issue #26 – Create Footer**

Design the website footer.

## **Issue #27 – Create Dashboard Layout**

Build the common dashboard layout.

## **Issue #28 – Create Loading Screens**

Implement loading and skeleton components.

## **Issue #29 – Create Error Pages**

Design 404 and error pages.

## **Issue #30 – Customer Registration**

Implement customer registration.

## **Issue #31 – Customer Login**

Implement secure customer login.

## **Issue #32 – Admin Login**

Implement secure administrator login.

## **Issue #33 – Forgot Password**

Allow users to request password reset.

## **Issue #34 – Reset Password**

Implement password reset functionality.

## **Issue #35 – Role-Based Access Control**

Restrict pages based on user roles.

## **Issue #36 – Add Vehicle**

Allow customers to register new vehicles.

## **Issue #37 – Edit Vehicle**

Update vehicle information.

## **Issue #38 – Delete Vehicle**

Remove registered vehicles.

## **Issue #39 – View Vehicle Details**

Display complete vehicle information.

## **Issue #40 – Upload Vehicle Image**

Allow customers to upload vehicle photos.
